Mosaic plasters

Decorative plaster – durability and originality of finishing

MOZATYNK-S 050, MOZATYNK-S 051

To be applied on exposed surfaces, prone to damage and soiling. Particularly recommended for building foundation areas, fence elements, balustrades, also as staircase and corridor wainscot in such public buildings as schools, kindergartens, offices, and in residential housing. We propose the MOZATYNK-S 050 mosaic plaster available in 78 color versions, or MOZATYNK-S 051 – which is mixed in the purchase site. This solution offers 12 aggregate colors, which can produce nearly 500 color combinations.

Mosaic plasters are an alternative to ceramic, stone, clinker wall cladding, paints and structural plasters, or wood paneling. Thanks to their excellent resistance to impacts and abrasions, as well as their resistance to the detrimental effects of water, the finished façade maintains its intact appearance for years. The plasters offer interesting colors and textures, and the surfaces coated with mosaic mortar is easy to maintain in cleanness. It can be washed and scrubbed without discoloring or losing its mechanic durability. In the recent years, mosaic plasters have become increasingly popular as an indoor finishing solution, often replacing traditional ceramic tiles or plasters, as it surpasses them in terms of durability, resistance to impacts and soiling. Mosaic plaster can be successfully used in living rooms, kitchens and bathrooms, as well as in corridors and staircases.

MOZATYNK-S 050 acrylic resin decorative render

- waterproof
- frost-proof
- good adhesion
- high elasticity
- high resistance to UV rays
- resistance to weather conditions
- for manual and machine-spraying application of decorative, thin-layer plaster mortars
- outdoor use: for performing decorative pedestal surfaces, balcony balustrades, fence elements
- indoor use: corridors, staircases, exhibitions
- for concrete groundwork, mineral priming plasters, plasterboards, including fiber plasterboards, and for application on reinforced layers in thermal insulation systems with mineral wool and Styrofoam
